NextSwath End-of-Row Turn Technology: Now Available

Trimble® NextSwath™ end-of-row turn technology license is now available for users of the TMX-2050™ display with FmX® Plus field application and Autopilot™ automated steering system.

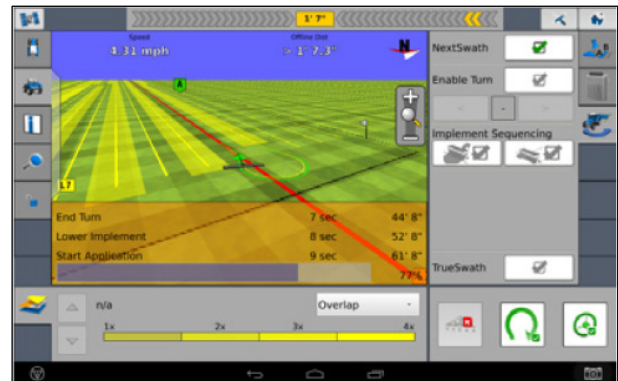

When approaching the end of a crop row, the NextSwath technology will automatically calculate and execute the best possible path to turn around the vehicle and approach the next crop row or swath.

Users working with a towed implement can also enable the option to optimize the turn for the implement position.

By automating the turning process, the NextSwath solution can:

- Dramatically improve the operator's performance.
- Eliminate towed implement undershooting or overshooting.
- Minimize skips and overlaps when lining up for the next row.

This improved turning efficiency and repeatability can increase yield while also saving time and fuel costs, and preventing crop damage.

New Licenses and Feature Unlocks

Part Number	Description	Price (USD)
96552-02	License, TMX-2050/XCN-2050™ display, NextSwath	\$ 1,545

Note: Requires the NextSwath feature license, FmX Plus application, and Autopilot steering system.

Note: The NextSwath technology can make every operator more efficient, but does not eliminate the need for a skilled operator in the vehicle cab.

Availability

The NextSwath license is now available on the Agriculture Partners website, <http://agpartners.trimble.com>.
